### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 21-23, 26-28 are rejected under 35 U.S.C. 102(e) as being anticipated by Di Cioccio et al. (US 2006/0125057).

Di Cioccio describes a composite SiCOI substrate comprising an off-axis SiC substrate with a polytype selected from the group of 4H and 6H (paragraphs [0020,0042,0043]) and epitaxial layer of SiC on the substrate (paragraphs [0021,0022,0044]). Di Cioccio describes the method for forming the substrate including successfully growing several SiC layers on the substrate (paragraphs [0026,0027], claims 2-4). This method appears to be the same as that of the invention method for forming the substrate as described in the summery of the specification. Therefore, the substrate formed by Di Cioccio would include claimed carrot defect having a nucleation point in the vicinity of an interface between the substrate and the epitaxial layer, wherein the carrot defect terminates within the epitaxial layer. The burden is upon the Applicant to prove otherwise. *In re Fitzgerald*. 205 USPQ 594.

Application/Control Number: 10/790,406 Page 3

Art Unit: 1765

Referring to claim 26, the substrate further includes a buffer layer (paragraphs [0056,0058]).

Referring to claims 27 and 28, the flow rate of the doping agent, nitrogen, is from 2-2000 sccm (paragraph 0038]). This flow rate would create a dopant concentration of 1E18 cm<sup>-3</sup> or greater.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 24, 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Di Cioccio as applied to claim22 above, and further in view of admitted prior art.

Referring to claims 24, 25, Di Cioccio is silent about the SiC substrate is cut off-axis towards the <1120> direction or perpendicular to the c-axis. However, it is well known to one skilled in the art at the time of the invention to grow the epitaxial layer on such substrate as described in pages 2 and 3 of the specification. Therefore, one skilled in the art at the time of the invention would find it obvious to use such substrate in order to provide an epitaxial structure for applications where a high voltage blocking capability is required (page 2 of the specification, line 21,22).

### Election/Restrictions

5. Applicant's election without traverse of claims 21-28 in the reply filed on 4/19/06 is acknowledged.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Duy-Vu N. Deo whose telephone number is 571-272-1462. The examiner can normally be reached on work at home Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nadine Norton can be reached on 571-272-1465. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
